TECHNICAL SKILLS

Programming Language	Python, C, Java, PineScript, JavaScript
ML/AI	Scikit-learn, TensorFlow, PyTorch, LLM
Database	SQL, MongoDB
Tools	GitHub, Power BI, Jupyter Notebook, VS Code

WORK EXPERIENCE

Millicent Technologies, Mumbai, India	2022-24
Stock Market Research and Trading Strategy Development	
- Gained a strong understanding of technical analysis and market indicators. - Built various trading strategies, custom indicators, and screeners using TradingView's Pine Script. - Backtested and optimized strategies to improve performance and profitability. - Analyzed historical data and market trends to refine trading approaches.	
Algorithmic Trading Engine Development	
- Designed and developed an algorithmic trading engine in Python. - Implemented a data pipeline for retrieving and processing real-time candle data. - Developed trade signal generation logic based on predefined strategies. - Automated order placement for seamless execution of trades in live markets. - Optimized the system for efficiency and performance under real-world conditions.	

EDUCATION

Masters in Computer Science , Stevens Institute of Technology, Hoboken, NJ	2024-May 26
Course Work: Knowledge Discovery and Data Mining, Database Management Systems 1, Database Management Systems 2, Web Programming 1, Concurrent Programming, Machine Learning: Fundamentals and Applications	
Bachelors in Computer Engineering , Xavier Institute Of Engineering (XIE), Mumbai, India CGPA: 8.67	2018-22

PROJECTS

Bankruptcy Prediction using Ensemble Modeling	2025
- Collaborated in a 4-member team to predict corporate bankruptcy using financial ratios from Taiwanese firms. - Led data preprocessing efforts: performed correlation filtering and VIF analysis, reducing features from 95 to 36. - Applied Gaussian Mixture Models to cluster companies into 6 financial subgroups with balanced class representation. - Designed and evaluated base models (KNN, SVM, Random Forest, Gradient Boosting) tailored to each subgroup. - Integrated subgroup models using stacking (Logistic Regression), improving generalization accuracy from 62% to 70%. - Tools used: <code>scikit-learn</code>, <code>joblib</code>, <code>Pandas</code>, <code>Jupyter Notebook</code>.	
New York Street Art Map	2025
- Collaborated with a team of 4 members to build an interactive web application showcasing New York City street art. - Developed a dynamic map interface (using <code>Leaflet.js</code>) with default pins; enabled user registration and posting of new artworks. - Implemented user authentication, admin features for content moderation, and stored geotagged artwork submissions in a MongoDB database. - Designed a responsive and intuitive frontend for seamless browsing and contribution of street art entries. - Technologies used: <code>JavaScript</code>, <code>Leaflet.js</code>, <code>MongoDB</code>, <code>HTML/CSS</code>.	
Warehouse Management System	2022
- Integrated Arduino with peripheral sensors to monitor environmental conditions within the warehouse, such as temperature and humidity. - Developed a database server to capture and log real-time sensor data transmitted by Arduino. - Designed a dynamic web interface to visually present logged sensor data, enabling efficient monitoring and decision-making.	
RiceLeaf Disease Detection	2022
- Developed an image classification model using Microsoft Custom Vision to accurately identify diseases in rice leaves. - Deployed the trained classifier via Azure App Services, enabling scalable and accessible disease detection for end users.
